FOR IMMEDIATE RELEASE

ENERGY SURVEYS, INC EXPANSION INTO SECOND LOCATION

Clarksburg, WV – August 6, 2014 – Today Energy Surveys, Inc. (ESI) is proud to announce that it has expanded into a second location. Energy Surveys, Inc., which is headquartered at 418 Mayo St. in Clarksburg, WV has experienced substantial growth within its survey division and through the establishment of its new materials testing division. ESI has therefore chosen to expand its operations to a second location in Washington, Pennsylvania.

In the last seven months Energy Surveys, Inc. has experienced significant growth in many areas of its company. Along with surveying, mapping, and GIS services, Energy Surveys is delighted to declare the opening of its full service materials testing and inspection division. Key business personnel will be heading up this division in a new laboratory located in Clarksburg, WV. This added aspect of the business will allow Energy Surveys, Inc. to offer service to an even more diverse clientele than it did before.

Vice President Scott Shaver stated; “We have had major success in our Clarksburg location and are looking forward to our expansion into Pennsylvania. The materials testing division is something that we are all really excited about. It will add another service to our repertoire and make ESI even more competitive in our industry”.

Another area of growth can be seen within Energy Surveys, Inc.’s survey division. A key addition to the ESI team was made last month when they brought aboard another experienced licensed surveyor. The new team member is licensed in Pennsylvania and New York. He will be bringing many years of experience to the new Energy Surveys, Inc. office located in Washington, Pa when it opens within the month. Being that Washington, PA has become a major hub for many businesses in the Oil and Gas industry, establishing a base of operations there is a major play for ESI. This will allow them to stay in close contact with their existing clients and potential new business in the heart of the Oil and Gas industry.

President Kurt Newbrough stated; “I’m so proud of what we have been able to accomplish in this short amount of time. Our client list is growing, the ESI staff is growing, our truck fleet is growing, and our range of services that we offer is growing. All of this is a tribute to the entire ESI team. I have no doubt that with everyone’s hard work and dedication we will do nothing but continue to grow, the sky is the limit.”

On top of all this growth, ESI’s extensive relationships within the A&E industry will allow them to offer teaming efforts to provide civil design services and solutions, as well as permitting, and environmental controls. Their teaming firms currently have Professional Engineer licenses in WV, PA, OH, KY, and VA. This auxiliary support allows for a broader range of scope when it comes to executing the biggest of projects.
